## Коли починати писати статтю?

- ~~Як прийде натхнення~~
- ~~Перед звітом~~
- ~~Коли не вистачає для звання~~
- **Коли отримано нові, статистично достовірні результати, які розширюють картину розуміння світу**

## За яким форматом?

Тим що вказано в правилах для авторів обраного видання

## Навіщо науковцю читати статтю?

- Знайти літературу, колег, гранти за своєю темою
- Не відкривати велосипед

## Що ви очікуєте знайти у публікації?

- Нові дані
- Чіткість викладень
- Перевірені методики
- Структурованість
- Посилання на власні роботи ;)

## Без чого не варто писати статтю

- Актуальна тема (см перелік літератури)
- Отримані нові, перевірені, цікаві результати
- Знайдено вирішення певної проблеми

## Визначитися з форматом публікації

- Огляд
- Експериментальна стаття
- Коротке повідомлення
- Case study

## Обговорення

- **Не повторюють результати**
- Співставлення отриманих результатів з наявними

- Співставити з світовими аналогами
- Означити місце даного дослідження
- Запобігти плагіату
- Для журналу і вченого = визнання
- Часто вказані лише власні роботи або дуже “старі” статті

Journal of Molecular Biology and Genetics, 2012, 2012, 1-10

The paper is a review of the research of Biosensors (Biochemical Sensors) concerning the development of biosensors based on electrochemical, optical, piezoelectric, and other transduction mechanisms. It discusses the principles of biosensor operation, the design of biosensors, and the applications of biosensors in various fields of science and technology. The paper also discusses the challenges and future perspectives of biosensor research.

**Introduction:** The last decade has shown unprecedented interest in the development of analytical devices for the detection, quantification, and monitoring of different biological and chemical compounds. The diversity of R&D of biosensors is increased by the extensive number of...

in direct contact with a physical transducer, which transduces the information from transduction domain into an electrical or optical signal. The amplification of such signal depends on the concentration of the analysed compound (analyte) in the sample. Biological entities...

**Abstract**  
Probiotics are essential for establishing and maintaining optimal immune health. The probiotic therapy is known from alternative medicine for ages; however, the recent demonstration of the normal microflora to reduce severe infections has introduced the science-based concept of therapeutic application of potentially beneficial probiotic microorganisms for a treatment of functional disorders. Traditionally, probiotics are associated with dairy products, however, novel formulations are needed, first of all, originated from naturally occurring probiotic microorganisms as the most robust organisms. Especially, safe and robust probiotics are needed for long-term storage, especially, environmental (especially, marine) biomes, where humans are exposed to adverse environmental factors. Kombucha beverage is a natural Culture of Bacteria and Yeast (SCOBY) and associated with health promoting effects. Kombucha tea/ice is being in use in human food as a probiotic drink for feeding and health prophylaxis effects, however, new research opportunities promise to «re-assess» going to be used pharmacologically.

**Highlights**

- First-time microbial composition was examined to culture-independent approach
- High bacterial genus and species diversity, with their population of Acidobacteria
- Ascomycota dominated population was identified (over 90%)
- Fungal population was dominated by *Cladosporium* spp. (ca. 90%)
- Dominant species represented associated with kombucha tea samples

**Abstract**  
Kombucha is a fermented tea beverage that, as a consequence of fermentation, contains ethanol, carbon dioxide, a high concentration of acidogenic, acetic and lactic acid as well as a number of other metabolites and is thought to contain a number of health-promoting components. This includes the addition of kombucha as a synthesis of bacteria and yeast consortia with a cellulose matrix, which forms a floating mat in the tea, and generates a new layer with each successive fermentation. The specific variety of the microbial population present has been the focus of numerous studies. In this study, the diversity of kombucha tea cultures from various locations was analyzed. To gain a more comprehensive insight into the kombucha microbiome we have carried out the first culture-independent, high-throughput sequencing analysis of the bacterial and fungal populations of 9 distinct kombucha tea samples. The microbial composition of kombucha tea samples from 9 distinct locations as well as the related fermented kombucha tea samples. Following the analysis, it was established that the single bacterial genus present was *Cladosporium*, present in 100% of most samples, with only two populations of Acidobacteria observed (10%). A prominent yeast-like population was also identified up to 50%, with a number of subdominant genera, not previously associated with kombucha, also being revealed. The yeast populations were found to be dominated by *Campylobacteraceae* sp. 100% in fermented kombucha, with a greater fungal diversity present in the kombucha matrix, including *Cladosporium* spp. 100%.

### Journal Citation Reports

#### [What's New in Journal Citation Reports?](#)

The Journal Citation Reports module within InCites allows you to evaluate and compare journals using citation data drawn from approximately 12,000 scholarly and technical journals and conference proceedings from more than 3,300 publishers in over 60 countries. Journal Citation Reports is the only source of citation data on journals, and includes virtually all specialties in the areas of science, technology, and social sciences.

JCR provides dynamic, interactive features supported by visualizations of JCR indicators that allow researchers and librarians, as well as publishers, to compare, evaluate and inform their decisions on published research in varying fields.

Key features in the Journal Citation Reports allow you to:

- Focus on desired subject categories, enabling you to review journal titles and key performance indicators in the category;
- Compare multiple journals based on selected indicators.

### Title Suppressions

Metrics for the titles listed below are not published due to anomalous citation patterns found in the 2016 citation data. These patterns represent a distortion of the Journal Impact Factor and rank that does not accurately reflect the journal's citation performance in the literature. In the interest of fairness and to provide an important and objective measure of a journal's contribution to scholarly communication, JCR staff has decided to suppress these titles. The suppression of titles is a distortion of the Journal Impact Factor by an excessive concentration of citations gives rise to the need for suppression. JCR staff will forward the titles and the titles will be included in a future edition of JCR when the anomalous patterns are resolved. Coverage of these journals in Clarivate Analytics products is not immediately affected by suppression from the JCR. However, the titles may be subject to review to meet the quality and publication standards necessary for inclusion in Web of Science. More information on journal suppression is available at: <http://wokinfo.com/media/pdf/jcr-suppression.pdf>.

ResearcherID provides a solution to the author ambiguity problem within the scholarly research community. Each member is assigned a unique identifier to enable researchers to manage their publication lists, track their times cited counts and h-index, identify potential collaborators and avoid author misidentification.

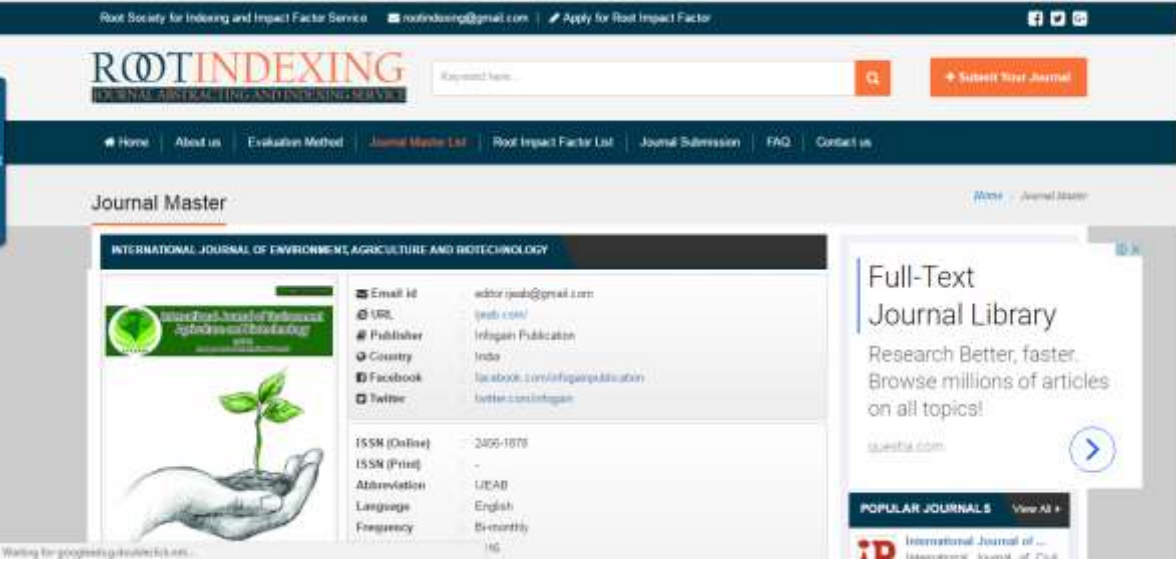

Your ResearcherID information integrates with the *Web of Science* and is ORCID compliant, allowing to claim and showcase your publications from a single one account.

**Abstract**  
We consider the relationship between the tight-binding Hamiltonian of the two-dimensional honeycomb lattice of carbon atoms with nearest neighbor hopping only and the 2+1 dimensional Hamiltonian of quantum electrodynamics, which follows in the continuum limit. We pay particular attention to the symmetries of the free Dirac fermions including spatial inversion, time reversal, charge conjugation and chirality. We illustrate the power of such a mapping by considering

# Чому складно оцінювати здобутки науковця?

- Важко вгадати варіації транслітерації прізвища
- Однофамільці – ускладнюють ідентифікацію, особливо якщо працюють в одній галузі і одній установі

### What is ResearcherID?

ResearcherID provides a solution to the author ambiguity problem within the scholarly research community. Each member is assigned a unique identifier to enable researchers to manage their publication lists, track their times cited counts and h-index, identify potential collaborators and avoid author misidentification. In addition, your ResearcherID information integrates with the *Web of Science* and is ORCID compliant, allowing you to claim and showcase your publications from a single one account. Search the registry to find collaborators, review publication lists and explore how research is used around the world!

ORCID

Did you know you can associate your ORCID ID with your ResearcherID account?

I would like to create an ORCID record. The Open Researcher and Contributor ID (ORCID, Inc.) is a non-profit organization that aims to solve the author/contributor name ambiguity problem in scholarly communication by creating a central registry of unique identifiers. These identifiers can be used within various systems you may interact with in your professional research workflow, including manuscript submission, etc.

I already have an ORCID record. By creating an ORCID you will be able to link your ResearcherID account with this centralized registry.

No, thank you. Learn more about ORCID. If you choose not to get or associate an ORCID, you can do it at a later time.

### RESEARCHERID

**What is ResearcherID?**

ResearcherID provides a solution to the author ambiguity problem within the scholarly research community. Each member is assigned a unique identifier to enable researchers to manage their publication lists, track their Times Cited counts and *h*-index, identify potential collaborators and avoid author misidentification. In addition, your ResearcherID information integrates with the Web of Science and is ORCID compliant, allowing you to claim and showcase your publications from a single one

## Друга серія вебінарів українською в січні

### **Тема: Пошук і аналіз наукової літератури в Web of Science.**

**Тези:** Базові та розширені можливості пошуку. Комбінування фільтрів і тегів, пошук у пристатейній літературі та схожих записах. Оцінка обраної вибірки, звіти по цитуванню, збереження результатів. Додаткові бази на платформі.

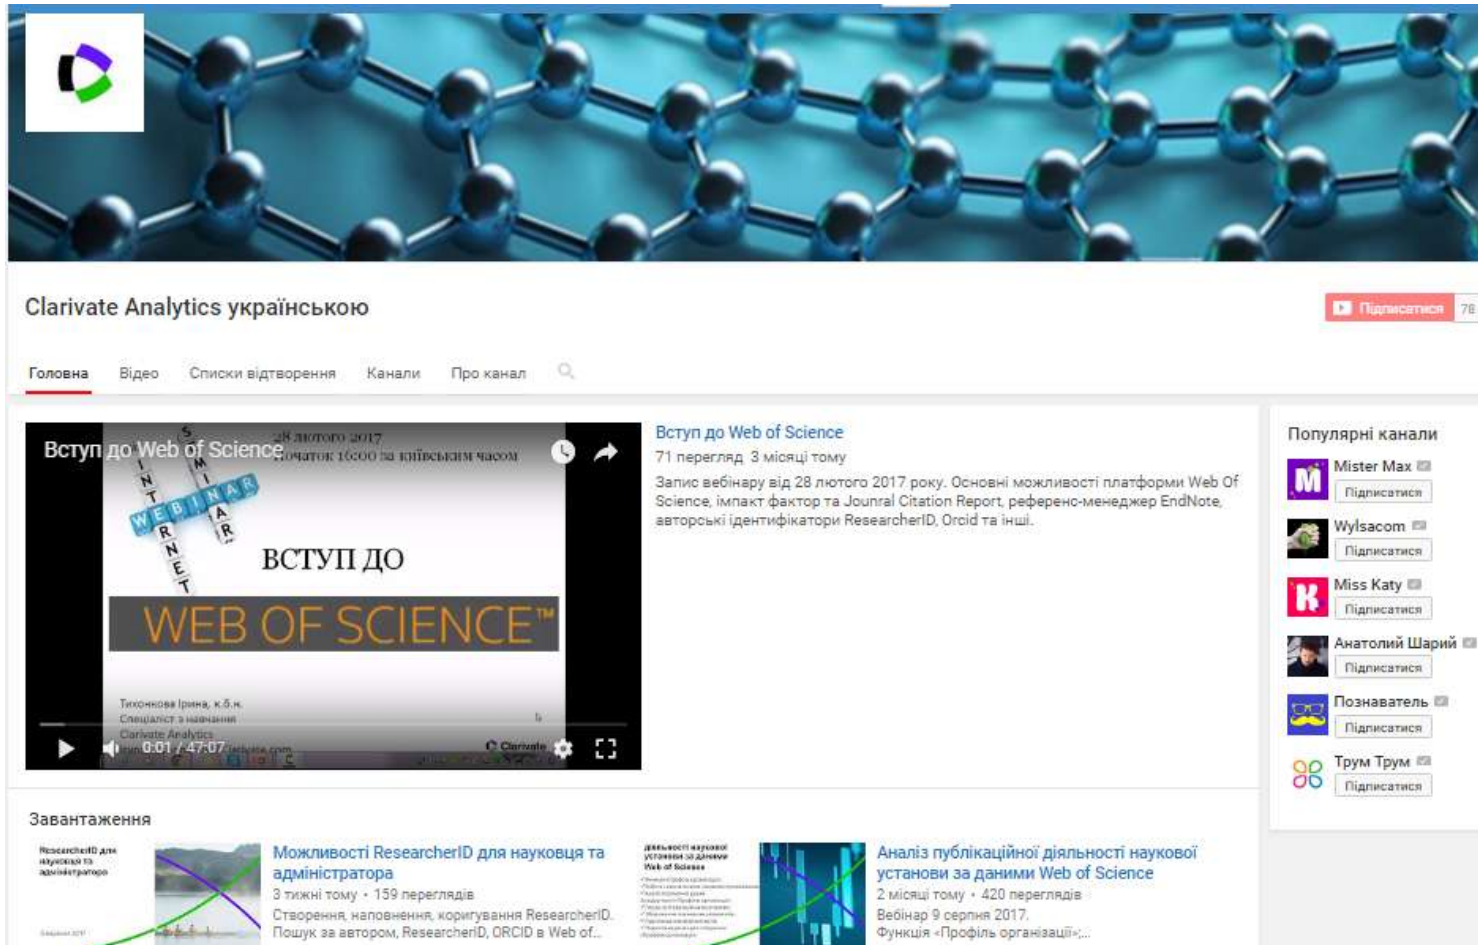

### **Тема: Підбір та аналіз наукових видань для публікації власних досліджень.**

**Тези:** Як підібрати видання для публікації? Про що говорить імпаکت-фактор, квартиль і інші показники в Journal Citation Reports. Скільки коштує публікація? Чи можна опублікуватися в міжнародному виданні безкоштовно? Як оформити перелік літератури? Хто створює хижацькі видання як не стати їхньою жертвою. Як перевірити куди мене запросили публікуватися?

**Тема:** ResearcherID та EndNote – генеруємо публікаційні звіти з радістю.

**Тези:** Складнощі у пошуку і аналізу здобутків науковця. Авторські профілі ResearcherID та ORCID, чому вони мають бути в актуальному стані, що показують колегам і як заповнити їх без проблем. Гра з метаданими та як створити звіт за публікаціями свого відділу.
